MICRODERMABRASION FOR SKIN REJUVENATION

"The Epidermal and Dermal Changes Associated with Microdermabrasion." *Freedman bm, rueda-pedraza e, waddell sp. The American Society for Dermatologic Surgery. 2001 ;27(12): 1031-4.*

"This study suggests that microdermabrasion produces significant clinical improvement by a mechanism resembling a reparative process at the dermal and epidermal levels."

MICRODERMABRASION FOR DIMINISHING SIGNS OF AGING

"Molecular analysis of aggressive microdermabrasion in photoaged skin." *Darius J. Karimipour; Laure Rittie; Craig Hammerberg; et. al. Archives of Dermatology, 2009; 145 (10): 1114.*

The study concluded "that aggressive non ablative microdermabrasion is an effective procedure to stimulate collagen production in human skin." Also "the beneficial molecular responses, with minimal downtime, suggest that aggressive microdermabrasion may be a useful procedure to stimulate remodeling and to improve the appearance of aged human skin."

MICRODERMABRASION TREATMENTS FOR FACIAL SCARRING

From "aluminum oxide crystal microdermabrasion, a new technique for treating facial scarring." *Tsai Ry, Wang CN, Chan hl. The American Society for Dermatologic Surgery. 1995: 21 (6): 539-42.*

The study concluded that "all patients treated had good to excellent clinical improvement" after an average of 9 consecutive microdermabrasion treatments.

OUR SERUMS

Each high-grade topical cosmetic serum option features carefully selected ingredients, designed to target specific dermal areas of concerns.

REJUVENATE

A proprietary blend of advanced peptides. Peptides are known to support the skin’s natural renewal processes, helping to maintain a youthful, healthy-looking appearance.

BRIGHTEN

A robust formula containing Kojic Acid, an effective lightening, anti-microbial, and antioxidant ingredient. Studies have shown that Kojic Acid can be effective at improving the appearance of hyperpigmentation and melasma.

CLARIFY

A formula containing Salicylic Acid and Lactic Acid, designed to exfoliate, cleanse, and clarify, resulting in the appearance of clearer, smoother, more vibrant skin.

VITAMIN C

A moisturizing and brightening blend of Vitamin C and Hyaluronic Acid. Vitamin C has been proven to be a powerful antioxidant, collagen booster, and skin brightener.

HYDRATE

A deeply hydrating and soothing blend of Hyaluronic Acid, Aloe Vera, Green Tea Extract, and Vitamin E. Intense hydration significantly enhances skin firmness and elasticity.

FIBRO-GF

A next-generation regenerative delivery system powered by recombinant human fibronectin and epidermal growth factor (EGF), enhanced with the patented advanced transdermal technology for optimal penetration and efficacy.

Fibronectin, a key extracellular matrix protein, supports skin repair by promoting cell adhesion, migration, and collagen regeneration. Combined with EGF, it accelerates cellular renewal, strengthens skin resilience, and restores a healthy skin barrier.

Enriched with dual hyaluronic acid and amino acids, the formula delivers immediate hydration while supporting long-term regeneration and visible anti-aging benefits.

Designed for individuals seeking advanced skin regeneration and repair, delivering deep hydration while improving skin resilience and overall skin health.

CUSTOM

This single procedure kit provides the flexibility to deliver any desired topical cosmetic solution. The desired solutions must be water-based in order to flow through the DermaFrac® custom cartridge.

Not intended for medical use

DERMAFRAC® C System is a compact, portable system that provides two modalities:

DERMAFRAC® MICRONEEDLING + INFUSION

Non-invasive microneedling procedure that simultaneously delivers topical cosmetic serums under vacuum occlusion.

The DermaFrac® roller tips, designed with uniquely placed needles, ensure optimal infusion of topical cosmetic serums formulated to meet specific skin conditioning goals.

No numbing required, no pain or downtime for improved texture and luminosity of the skin.

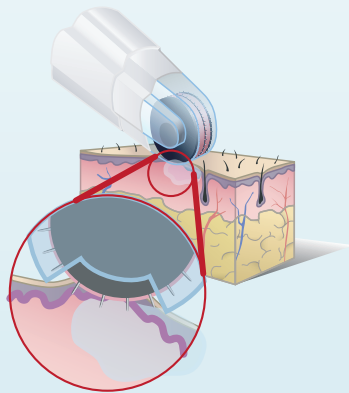

DermaFrac® delivers the best infusion of the best ingredients for the best results.

The aging process causes the epidermis and dermis to lose their thickness. Loss of collagen and elastin fibers leads to skin laxity and distortion of the normal skin structure.

Gentle rolling action of the microneedling prepares the skin for infusion of the selected serums.

DermaFrac® puts skin under tension and draws it into the roller tip under vacuum occlusion as it gently is applied to the skin, allowing a pain-free application.

DermaFrac® delivers proprietary topical cosmetic serums into the skin to enhance intended results for your clients.

EXFOLIATION Procedure

Specially designed tips with abrasive pads facilitate exfoliation with a controlled vacuum for efficient removal of the exfoliated skin.

Three Exfoliation Grit Strengths
Gentle - Moderate - Coarse
